The Parker Filtration ASIC Performer Pressure Transducers and Transmitters.

To overcome the historical problems caused by “gauge creep” of thick film sensors and the fragility of peizo-electric/ceramic based sensors, the new ‘Performer’ range uses a high-grade stainless steel element, which is coated with layers of both insulative and alloy materials. These are trimmed to a very close tolerance using state of the art, semiconductor grade, laser and ion beam methods. This extremely accurate “front end” is then coupled with Application Specific Integrated

Circuitry (ASIC) to produce a sensor that is both accurate and repeatable over a wide, fully compensated, temperature range, -40°C to +125°C. The “Performer” is now available in a variety of thread-form and connector options.

This new design offers a high stability, very low drift device, which can operate over a wide thermal range. Powered from an extended working supply range (11-30Vdc {PTD} and 11-35Vdc {PTX}).

In addition to the standard 6 pressure ranges available, using the ASIC technology (Application Specific Integrated Circuit) programmable software, any variation can be manufactured. Consult Parker for any additional information.

A comprehensive range of Pressure Transducers and Transmitters are available from Parker Filtration.
